

Science

Curriculum Content

To instill knowledge and understanding of our world, the Early Years' science curriculum focuses on learning through a series of study topics, which allow students to learn through exploration and creative play. To cultivate a culture of life-long learning, our students learn a variety of topics through fun and meaningful ways. Both inside and outside of the classroom, our activities are carefully planned to promote learning and understanding of our world, with topics ranging from family, animals, nature, general sciences, food, people, countries, and society.

At the same time, our School provides a safe and secure environment, where children are encouraged to express themselves and develop confidence, enabling students to build foundations on mastery of communication and language skills. A significant portion of our curriculum and school setting focus on the development of our students' social and emotional skills. Our activities are arranged to allow for collaborative learning and emphasis is placed on personal development.
